

PDFReactor Quick Start Guide

1

DOWNLOAD

Go to www.pdfreactor.com/download and download a PDFReactor package suitable for your system environment.

If you don't have a license key you can get a trial key at <https://www.pdfreactor.com/request-trial/>.

2

INSTALLATION

Open the PDFReactor package you just downloaded and...

- Windows ...run the Windows installer
- Linux ...unpack the archive or use the RPM
- Mac OS X ...run the OS X installer

3

INTEGRATION

Java library: Add the `PDFReactor/lib/pdfreactor.jar` file to your project's classpath.

.NET, PHP, Python, Perl, Ruby, JavaScript, Node.js: Go to the `PDFReactor/wrappers/` directory and copy the library that matches your integration language.

REST or SOAP: Visit <http://localhost:9423/service> for more information.

4

CONVERSION

```
PDFReactor pdfReactor = new PDFReactor();
Configuration config = new Config();

config.setDocument(
    "<html><body>Hello World</body></html>");

Result result = pdfReactor.convert(config);
byte[] pdfBytes = result.getDocument();
```
